## Helping mobile libraries with IT

We supply IT solutions from a number of different manufacturers to ensure we can provide the best solution at the best price.

We can assist with the deployment of a network within the mobile library, including laptops, wireless etc.

We can also help you access the internet from the mobile library – wherever it is! Now you can get **real-time access to the LMS**, offer **public internet access** and facilitate council “**shared services**”.

To get your vehicle online, we can provide 3G or satellite broadband. There are pros and cons to both options - let us help you choose the right solution.

The POINT systems demonstration vehicle at CILIP Mobilemeet, May 2010
